@imashishmishra

AI is not going to replace  
your job, but Developers  
who use AI will.

Here are 6 Ai tools that will  
change the way you code:

# CodeGPT

This is one of my most favorite tools!  
it can suggest code Completions  
based on the context of your code,  
and provide explanations for  
complex code snippets.

## Code GPT

Code GPT  [codegpt.co](https://codegpt.co) |  244,113 installs |  (77) | Free

Use the Official OpenAI API inside VSCode

 @imashishmishra

# Chat GPT-4

This tool is like Chat GPT-3 but way more advanced! it's like google but instead of giving you web pages it gives you the answer you are looking for!

**Ashish Mishra**

 @imashishmishra

# DeepCode (Snyk Code)

This tool uses machine learning to automatically detect and fix code issues. how cool is that!!

## Snyk Code

Secure code with a developer-friendly experience. Snyk Code uses a revolutionary approach designed to be developer-first. Conventional Static Application Security Testing (SAST) tools are limited by lengthy scans times and poor accuracy, returning too many false positives, and eroding developer trust. Snyk Code makes developer efforts efficient and actionable.

Snyk Code is powered by the DeepCode engine. Snyk Code is free for OSS and offers an amazing free plan for private repos.
