

*Data Science*  
**PYTHON, R, JULIA**

FEATURE COMPARISON

# BACKGROUND

MID 1980S		PYTHON	<p><b>Created by:</b> Guido Van Rossum</p> <p><b>Goal:</b> Simple, readable and easy to learn</p> <p><b>Purpose:</b> All purpose language</p>
MID 1990S		R	<p><b>Created by:</b> 3 researchers in New Zealand</p> <p><b>Created for:</b> Statisticians and Researchers</p> <p><b>Purpose:</b> Statistical comp. and graphics</p>
2012		JULIA	<p><b>Created by:</b> 4 computer scientists</p> <p><b>Goal:</b> Fix the problems of Python</p> <p><b>Purpose:</b> Scientific computing</p>

# FEATURES

- Interpreted language
- Object-orientated
- Dynamically typed
- General purpose
- Huge community
- Most popular language in the world

**PYTHON**

# FEATURES

- Interpreted language
- Functional language
- Dynamically typed
- Data centric
- Powerful graphics
- Many built in functions for statistical analysis

R

# FEATURES

- Compiled language
- Just in time compilation
- Functional language
- Multiple dispatch
- Dynamically typed
- High performance
- Interoperability

**JULIA**

*that's all folks*  
**WHICH LANGUAGE  
DO YOU ALREADY  
KNOW?**

LET ME KNOW IN THE COMMENTS

# *introduce* **ABOUT ME**

Hi, I'm Benjamin!

**I help you  
become a  
Data Scientist**

I post every day!

 Benjamin Simon
